Subject Index

Amplification of Nanosecond Duration Multiline HF Laser Pulses, Generation and, 39

Applications, High Average Power, Rare-Gas Halogen-Pumped Iodine Laser for Fusion, 22

Application of High Power Lasers to Problems in the Nuclear Fuel Cycle, 124

Assessment of Electron Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, 68

Atomic Iodine Photodissociation Lasers, High Power, 32

Atomic Uranium Lifetimes for Isotope Separation, Measurement of, 150

Average Power, Rare-Gas Halogen-Pumped Iodine Laser for Fusion Applications, High, 22

Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron, 68

Chemical Lasers, Deuterium Fluoride CW, 51

Combustion Driven Gas Dynamic CO_2 Lasers, 91

Components Exposed to Nanosecond Laser Pulses, Damage Limits for Optical, 15

CO Lasers—What, How, When and Where?, High Power, 59

CO_2 Lasers, Combustion Driven Gas Dynamic, 91

CW Chemical Lasers, Deuterium Fluoride, 51

Cycle, Application of High Power Lasers to Problems in the Nuclear Field, 124

Damage Limits for Optical Components Exposed to Nanosecond Laser Pulses, 15

Design, Assessment of Electron Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical, 68

Deuterium Fluoride CW Chemical Lasers, 51

DF/CO_2 Transfer Lasers, Performance of, 111

Discharge Lasers, High-Power Electric, 98

Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron Beam and, 68

Driven Gas Dynamic CO_2 Lasers, Combustion, 91

Dynamic CO_2 Lasers, Combustion Driven Gas, 91

Electric Discharge Lasers, High-Power, 98

Electrical Design, Assessment of Electron Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and, 68

Electron Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of, 68

Energy HF Pulsed Lasers, High, 44

Excimer Lasers, Review of UV, 132

Fluoride CW Chemical Lasers, Deuterium, 51

Fuel Cycle, Application of High Power Lasers to Problems in the Nuclear, 124

Fusion Applications, High Average Power, Rare-Gas Halogen-Pumped Iodine Laser for, 22

Fusion Program, The National Laser-, 2

Future Rangefinder Technology, Present and, 84

Gas Dynamic CO_2 Lasers, Combustion Driven, 91

Gas Halogen-Pumped Iodine Laser for Fusion Applications, High Average Power, Rare-, 22

Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron Beam and Discharge Technologies for High Pressure, 68

Generation and Amplification of Nanosecond Duration Multiline HF Laser Pulses, 39

Glass Lasers, Status of Large Neodymium, 7

Halogen-Pumped Iodine Laser for Fusion Applications, High Average Power, Rare-Gas, 22

HF Laser Pulses, Generation and Amplification of Nanosecond Duration Multiline, 39

HF Pulsed Lasers, High Energy, 44

High Average Power, Rare-Gas Halogen-Pumped Iodine Laser for Fusion Applications, 22

High Energy HF Pulsed Lasers, 44

High Power Atomic Iodine Photodissociation Lasers, 32

High Power CO Lasers—What, How, When and Where?, 59

High-Power Electric Discharge Lasers, 98

High Power Lasers for Isotope Separation, 144

High Power Lasers to Problems in the Nuclear Fuel Cycle, Application of, 124

High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron Beam and Discharge Technologies for, 68

Iodine Photodissociation Lasers, High Power Atomic, 32

Iodine Laser for Fusion Applications, High Average Power, Rare-Gas Halogen-Pumped, 22

Isotope Separation, High Power Lasers for, 144

Isotope Separation, Measurement of Atomic Uranium Lifetimes for, 150

Kinetics and Electrical Design, Assessment of Electron Beam and Discharge Technologies for High Pressure Gas Laser Pumping in Terms of, 68

Large Neodymium Glass Lasers, Status of, 7
Laser for Fusion Applications, High Average Power, Rare-Gas Halogen-Pumped Iodine, 22
Laser-Fusion Program, The National, 2
Laser Pulses, Damage Limits for Optical Components Exposed to Nanosecond, 15
Laser Pulses, Generation and Amplification of Nanosecond Duration Multiline HF, 39
Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron Beam and Discharge Technologies for High Pressure Gas, 68
Laser Radar Requirements, 78
Lasers, Combustion Driven Gas Dynamic CO_2, 91
Lasers, Deuterium Fluoride CW Chemical, 51
Lasers for Isotope Separation, High Power, 144
Lasers, High Energy HF Pulsed, 44
Lasers, High Power Atomic Iodine Photodissociation, 32
Lasers, High-Power Electric Discharge, 98
Lasers, Performance of DF/CO_2 Transfer, 111
Lasers, Review of UV Excimer, 132
Lasers, Status of Large Neodymium Glass, 7
Lasers to Problems in the Nuclear Fuel Cycle, Application of High Power, 124
Lasers—What, How, When and Where?, High Power CO, 59
Lifetimes for Isotope Separation, Measurement of Atomic Uranium, 150
Limits for Optical Components Exposed to Nanosecond Laser Pulses, Damage, 15

Measurement of Atomic Uranium Lifetimes for Isotope Separation, 150
Multiline HF Laser Pulses, Generation and Amplification of Nanosecond Duration, 39

Nanosecond Duration Multiline HF Laser Pulses, Generation and Amplification of, 39
Nanosecond Laser Pulses, Damage Limits for Optical Components Exposed to, 15
National Laser-Fusion Program, 2
Neodymium Glass Lasers, Status of Large, 7
Nuclear Fuel Cycle, Application of High Power Lasers to Problems in, 124

Optical Components Exposed to Nanosecond Laser Pulses, Damage Limits for, 15

Performance of DF/CO_2 Transfer Lasers, 111
Photodissociation Lasers, High Power Atomic Iodine, 32
Power Atomic Iodine Photodissociation Lasers, High, 32
Power CO Lasers—What, How, When and Where?, High, 59
Power Electric Discharge Lasers, High-, 98
Power Lasers for Isotope Separation, High, 144
Power Lasers to Problems in the Nuclear Fuel Cycle, Application of High, 124
Power, Rare-Gas Halogen-Pumped Iodine Laser for Fusion Applications, High Average, 22
Present and Future Rangefinder Technology, 84
Problems in the Nuclear Fuel Cycle, Application of High Power Lasers to, 124
Pulsed Lasers, High Energy HF, 44
Pulses, Damage Limits for Optical Components Exposed to Nanosecond Laser, 15
Pulses, Generation and Amplification of Nanosecond Duration Multiline HF Laser, 39
Pumped Iodine Laser for Fusion Applications, High Average Power, Rare-Gas Halogen-, 22

Radar Requirements, Laser, 78
Rangefinder Technology, Present and Future, 84
Rare-Gas Halogen-Pumped Iodine Laser for Fusion Applications, High Average Power, 22
Requirements, Laser Radar, 78
Review of UV Excimer Lasers, 132

Separation, High Power Lasers for Isotope, 144
Separation, Measurement of Atomic Uranium Lifetimes for Isotope, 150
Status of Large Neodymium Glass Lasers, 7

Technologies for High Pressure Gas Laser Pumping in Terms of Kinetics and Electrical Design, Assessment of Electron Beam and Discharge, 68
Technology, Present and Future, Rangefinder, 84
Transfer Lasers, Performance of DF/CO_2, 111

Uranium Lifetimes for Isotope Separation, Measurement of Atomic, 150
UV Excimer Lasers, Review of, 132
